Roshan Pawar

Full Stack Developer

roshan78920@gmail.com | +91-7000298486 | Pune | 5 Years of experience

Profile Summary

Full Stack Developer with 5+ years of experience building scalable, secure, and cloud-native SaaS applications using Node.js, TypeScript, React.js, Angular, Python, and AWS. Experienced in end-to-end full-stack development, RESTful APIs, microservices, serverless architecture, SQL/NoSQL databases, and third-party integrations. Delivered production solutions across FinTech banking integrations, SaaS Application, IoT monitoring platforms, and AI-powered analytics applications using AWS Bedrock and LLM APIs. Skilled in system design, performance optimization, Redis caching, Docker, CI/CD, GitHub Actions, and automated testing. Strong track record of technical ownership, cross-functional collaboration, code reviews, and delivering reliable, high-performance enterprise applications.

Key Skills

Javascript | TypeScript | Node.js | Expresjs | Angular | React.js | Rest API Design | Microservices | SDLC Life Cycle | AWS Devops | Ci/Cd | Github Actions | Gitlab | MySQL | Postgresql | MongoDB | Playwright Automation | Unit Testing | GIT | AWS Lambda | API Gateway | Dynamo DB | Redis | Docker | S3 | Rxjs | AWS Serverless Architecture | Amazon Ec2 | Amazon Cloudwatch | API Integration | Authorization | Authentication Protocols | JWT | OAuth | System Design | Performance Management | Agile Methodology | Fullstack Development

Certifications

Google AI Professional Certificate

AWS Cloud Practitioner Essentials

Claude Code: Software Engineering with Generative AI Agents

AI for Data Analysis

AI for Writing and Communicating

Cybersecurity and the Internet of Things

Modern JavaScript: ES6 Basics

Work Experience

Full Stack Developer - Virtual Gain Technologies Pvt Ltd

Apr 2026 - Present

Virtual Gain Technologies Pvt Ltd

- Develop and maintain secure server-to-server (S2S) banking APIs, seamlessly integrating with banks and financial institutions such as Touras.
- Implement scalable backend services using Node.js, Express.js, and TypeScript, incorporating retries, idempotency checks, and automated transaction rollbacks to enhance system resilience and reliability.
- Enforce robust security protocols by encrypting payloads, integrating JWT and OAuth2 authentication mechanisms, applying API rate limiting, and maintaining comprehensive audit logs.
- Design and execute thorough unit and integration tests with Jest, achieving over 85% code coverage on settlement modules to ensure high-quality, reliable software delivery.
- Conduct detailed code reviews, manage production deployments, and promptly resolve live banking integration issues, including performance bottlenecks and slow API responses.
- Build interactive Angular dashboards with role-based access control, enabling operations teams to efficiently monitor transaction flows, settlement statuses, and API error metrics.

Software Engineer I - Vanix Technologies Pvt Ltd

Jan 2024 - Apr 2026

Vanix Technologies Pvt Ltd

- Executed full-stack development of enterprise SaaS applications utilizing Angular, ReactJS, TypeScript, Node.js, Express.js, and AWS.
- Designed, developed, and maintained scalable backend microservices, RESTful APIs, and robust database integrations.
- Created reusable frontend components, dynamic forms, and responsive user interfaces adhering to clean coding standards.

- Implemented secure authentication, authorization mechanisms, role-based access control (RBAC), and integrated third-party APIs.
- Deployed applications on AWS, managed cloud infrastructure, supported production releases, and conducted application monitoring.
- Enhanced application performance through lazy loading, API optimization, systematic debugging, and efficient data management.
- Contributed to technical discussions, conducted thorough code reviews, executed testing, and supported CI/CD pipelines within Agile/Scrum frameworks.
- Collaborated with cross-functional teams to deliver secure, maintainable, and production-ready software solutions.

Front End Software Engineer - Urspayce

Sep 2021 - Dec 2023

Urspayce

- Developed and maintained scalable, responsive enterprise SaaS applications utilizing Angular, TypeScript, JavaScript, Node.js, Express.js, HTML5, CSS3, and SCSS.
- Designed and implemented backend microservices and RESTful APIs to support business workflows, authentication, authorization, and database operations.
- Created reusable Angular components, dynamic forms, role-based dashboards, and interactive user interfaces for Visitor Management, Desk Booking, Meeting Room Booking, Mailroom Management, Asset Tracking, and Facility Management modules.
- Integrated frontend applications with backend services and third-party APIs to ensure seamless data flow and real-time updates.
- Deployed and managed cloud-based applications on AWS, ensuring production stability, scalability, continuous monitoring, and optimal performance.
- Optimized frontend and backend performance through lazy loading, efficient API handling, component reusability, and comprehensive debugging.
- Collaborated with cross-functional teams within Agile/Scrum environments to contribute to system design, testing, code reviews, CI/CD pipelines, and the end-to-end software development lifecycle (SDLC).

Projects

Workplace Management Software (UrSpayce - 12 Modules)

28 Months

Developed and deployed UrSpayce, a scalable, cloud-based Enterprise Workplace Management SaaS platform designed to digitize and streamline workplace operations through a centralized system. Designed and implemented key modules, including Visitor Management, Desk and Meeting Room Booking, Mailroom and Delivery Management, Asset Tracking, Facility Management, and Workplace Analytics. Automated visitor check-ins, workspace reservations, and operational workflows to improve efficiency and resource utilization. Built responsive, interactive dashboards and reusable UI components using Angular, React.js, TypeScript, JavaScript, HTML5, and CSS3. Developed backend microservices and RESTful APIs using Node.js and Express.js, implementing role-based access control (RBAC), secure authentication, real-time data integration, and database operations. Deployed and maintained applications on AWS, focusing on scalability, performance optimization, secure communication, and reliable enterprise operations

Battery Monitoring Iot System (Vanix Technologies)

15 Months

Developed and maintained a scalable, cloud-based IoT Battery Monitoring System at Vanix Technologies, enabling real-time monitoring, remote device management, and performance analytics for connected batteries. Designed and developed RESTful APIs and backend microservices using Node.js, Express.js, and TypeScript, along with responsive, interactive dashboards using Angular for visualizing battery voltage, current, temperature, State of Charge (SOC), device connectivity, and historical performance trends. Integrated AWS cloud services, including Lambda for serverless data processing, DynamoDB for telemetry storage, S3 for file management, CloudWatch for application monitoring, and SQS for asynchronous bulk device operations. Implemented WebSockets for real-time updates and Redis caching to optimize API response times and dashboard performance. Contributed to system architecture, third-party API integrations, debugging, testing, performance optimization, and production deployments.

Luminous Iot Platform (Vanix Technologies - Client Based)

5 Months

Led end-to-end development of the Luminous IoT Dashboard Platform, a cloud-based SaaS solution for real-time device monitoring, battery health tracking, performance analytics, and remote device management. Served as Technical Team Lead and primary point of contact for client communication, requirement gathering, technical discussions, sprint planning, task allocation, and project delivery. Designed and developed responsive, interactive dashboards using Angular, TypeScript, JavaScript, and Highcharts, including real-time data visualization, device status monitoring, analytics, and reporting. Developed and integrated RESTful APIs using Node.js and Express.js for device management, telemetry processing, and third-party integrations. Collaborated with backend, QA, and DevOps teams on AWS deployments, performance optimization, debugging, testing, code reviews, and production support, ensuring scalable, reliable, and high-quality solutions.

Jiotronik Iot Platform (Vanix Technologies - Client Based)

7 Months

Led the end-to-end development and delivery of Jiotronik, a client-based IoT Asset Monitoring and Management Platform designed for real-time asset tracking, device monitoring, operational analytics, and centralized asset management. Worked as a Full Stack Developer and Technical Team Lead, serving as the Single Point of Contact (SPOC) for client communication, requirement gathering, technical discussions, project updates, feedback management, and issue resolution. Designed and developed scalable frontend dashboards using Angular, TypeScript, JavaScript, and interactive data visualization components. Built and integrated backend services, RESTful APIs, and database

operations using Node.js and Express.js to support asset monitoring, device connectivity, telemetry processing, and reporting. Led development activities, sprint planning, task allocation, code reviews, and cross-functional coordination with QA and DevOps teams. Supported AWS cloud deployments, performance optimization, debug

Device Management Software (Vanix Technologies)

13 Months

Designed and developed a scalable, cloud-based IoT Cattle Monitoring System to track livestock location, health, and activity in real time using GPS-enabled collars and IoT sensors. Built a telemetry processing system to collect and analyze GPS coordinates, battery status, temperature, device connectivity, and animal health data. Developed backend microservices and RESTful APIs using Python, FastAPI, and AWS Lambda for device diagnostics, automated health score calculations, and telemetry processing, with data stored in DynamoDB and MongoDB. Implemented real-time communication using Socket.io and AWS API Gateway WebSockets to deliver live dashboard updates without page refreshes. Developed interactive Streamlit dashboards for device health monitoring, telemetry analytics, and performance visualization, integrating FastAPI services through REST and GraphQL APIs. Leveraged AWS SQS for asynchronous message processing and reliable background operations. Contributed to system architecture,

Cattle Monitoring System (Vanix Technologies)

15 Months

Led end-to-end full-stack development of a cloud-based IoT Cattle Monitoring System at Vanix Technologies, coordinating frontend, backend, AI/ML, DevOps, and firmware teams. Built scalable microservices and REST APIs using Node.js, Python, FastAPI, and AWS to process GPS, movement, temperature, battery, and livestock health telemetry. Developed Angular and TypeScript dashboards for real-time tracking, health analytics, device management, and alerts. Integrated third-party LLM APIs for AI-powered insights and Google Maps APIs for location visualization, geofencing, and boundary-crossing alerts. Implemented Socket.io and WebSockets for live updates; AWS Lambda, API Gateway, DynamoDB, S3, SQS, and CloudWatch for serverless processing, storage, messaging, and monitoring. Owned technical planning, task allocation, code reviews, testing, performance optimization, production deployment, and cross-team delivery. Applied Agile/Scrum practices and supported secure, scalable IoT SaaS architecture

Banking Solutions (Virtual Gain Technologies)

6 Months

Developed and maintained scalable backend services for enterprise banking solutions, specializing in secure Server-to-Server (S2S) third-party banking API integrations using Node.js, TypeScript, and Express.js. Designed and implemented RESTful APIs for seamless communication and reliable data exchange between banking systems and external service providers. Implemented API authentication, request validation, error handling, and asynchronous processing to enhance security and reliability. Improved API response times and backend performance through code optimization, debugging, refactoring, and performance tuning. Developed and maintained automated unit and integration tests using Jest to ensure code quality, reliability, and stability. Conducted code reviews, identified performance bottlenecks, resolved technical issues, and followed clean coding practices to deliver secure, high-performance, maintainable banking integrations. Technologies: Node.js, TypeScript, Express.js

Education

MCA | Software Engineering 2021

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal

Grade - 8.8/10

BCA - Bachelor of Computer Applications | Software Engineering 2018

Makhanlal Chaturvedi Rashtriya Patrakarita Vishwavidyalaya, Bhopal

Grade - 7.8/10
