ROSHAN PAWAR

Full Stack Developer | Software Engineer | MEAN & MERN Stack

Pune, Maharashtra, India | +91 7000298486 | roshan78920@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience building and shipping scalable web applications end to end: Angular and React.js frontends, Python (FastAPI) and Node.js backends, SQL and NoSQL databases, and AWS deployments. Built secure integrations with banks and financial institutions, IoT platforms that handle live data from thousands of devices, and a workplace SaaS product with 12+ modules. Delivered clear results: 85%+ test coverage on payment settlement code, 45% fewer database reads with Redis caching, and 60% less guest processing time. Strong in REST APIs, microservices, application security, Docker, and CI/CD. Comfortable owning modules from design to production support, reviewing code, and working in Agile teams.

TECHNICAL SKILLS

Backend & APIs: Python, FastAPI, Node.js, Express.js, TypeScript, RESTful APIs, OpenAPI/Swagger, JSON, HTTP, Microservices (12-Factor), Server-to-Server (S2S) Integrations, WebSockets, Socket.io, Event-Driven Architecture, Scalable Application Design, Logging and Error Handling

Databases (SQL & NoSQL): PostgreSQL, MySQL, MongoDB, Mongoose, Amazon DynamoDB, Redis (Caching, Sessions, Rate Limiting), Database Design, Indexing, Query Optimization

Testing & Debugging: Jest, Jasmine, Karma, Unit Testing, Integration Testing, End-to-End (E2E) Testing, Test-Driven Development (TDD), Debugging and Troubleshooting, Code Reviews

Security: OAuth2, JSON Web Tokens (JWT), Role-Based Access Control (RBAC), Data Encryption, API Security, Rate Limiting

Version Control, Docker & CI/CD: Git, GitHub, GitLab, Docker, Kubernetes (EKS), GitHub Actions, GitLab CI/CD, Automated Deployments, DevOps Practices

Cloud: Amazon Web Services (AWS), Lambda, ECS/Fargate, EKS, EC2, S3, DynamoDB, SQS, SNS, CloudFront, API Gateway, CloudWatch, AWS Bedrock, Serverless Framework

Frontend: Angular (v14-v18+), React.js, TypeScript, JavaScript (ES6+), RxJS, NgRx, Signals, HTML5, CSS3, SCSS, Angular Material, Bootstrap, Responsive Design

Methodologies & Tools: Agile/Scrum, JIRA, Postman, Swagger UI, VS Code, Cursor AI, GitHub Copilot, Claude API

PROFESSIONAL EXPERIENCE

Virtual Gain Technologies Pvt. Ltd. — Pune, Maharashtra, India
Full Stack Developer — *Apr 2026 - Present*

- Build and maintain secure server-to-server (S2S) banking APIs that connect our platform with banks and financial institutions such as Touras.
- Write backend services in Node.js, Express.js, and TypeScript. Added retries, duplicate-request (idempotency) checks, and automatic rollbacks so payments are processed reliably.
- Added security measures: encrypted payloads, JWT/OAuth2 authentication, API rate limits, and audit logs.
- Write unit and integration tests in Jest, with over 85% code coverage on the settlement modules.
- Review teammates' code, deploy to production, and find the root cause of issues in live banking integrations, including slow requests.
- Build Angular dashboards with role-based access so operations teams can track transactions, settlement status, and API errors.

Vanix Technologies Pvt. Ltd. — Hyderabad, Telangana, India
Software Engineer - I — *Jan 2024 - Apr 2026*

- Built full-stack features for three IoT products: Device Management, Battery Management, and Cattle Monitoring. They handled live data from thousands of devices.
- Built serverless backends on AWS Lambda, API Gateway, DynamoDB, and S3 using Node.js and Python, with dashboard response times under one second.
- Wrote Python and FastAPI services to process sensor data, calculate device diagnostics and health scores, and serve them to the dashboards through REST APIs documented with OpenAPI/Swagger.
- Added logging, error handling, and token-based authentication to backend services, and ran services in Docker containers deployed through CI/CD pipelines.
- Added Redis caching for frequently read device data, which cut database reads by 45%.

- Built remote update tools that send firmware updates (FOTA) and restart many devices at once.
- Improved Angular performance with OnPush change detection and RxJS, so live-data screens use less CPU.

UrSpayce Inc. Bhopal, Madhya Pradesh, India
Frontend / Full Stack Developer *Jun 2021 - Dec 2023*

- Helped design the architecture of a Workplace Management SaaS product with 12+ modules, including Visitor Management, Asset Tracking, and Desk Booking.
- Built backend REST APIs with Node.js, Express.js, and MongoDB that automated manual check-ins and cut guest processing time by 60%.
- Tuned MongoDB aggregation queries and indexes, which reduced slow query times by 35%.
- Built interactive floor-plan maps and analytics dashboards in Angular so facility managers could see how space is used in real time.
- Created reusable UI components with lazy loading and responsive layouts that work on desktops, tablets, and check-in kiosks.

KEY PROJECTS

Banking Gateway for Fund Transfers | *Virtual Gain*

- Built a banking gateway that handles encrypted fund transfers, balance checks, and real-time status webhooks.
- Designed error handling and timeout recovery so data stays correct even when bank responses arrive late or fail.
- Added structured logging, central error handling, and role-based authorization, with unit and integration tests running in a CI/CD pipeline.
- Built the Angular portal for monitoring transactions, generating PDF receipts, and handling disputes.

Environment: Node.js, Express.js, TypeScript, Angular, Jest, Redis, Docker, GitHub Actions, REST APIs, Webhooks, Postman

IoT Fleet and Telemetry Platform (Battery, Device, Cattle Monitoring) | *Vanix Technologies*

- Built a telemetry system that collects GPS location, battery voltage, temperature, and animal health data from hardware collars and sensors.
- Added live two-way communication with Socket.io and AWS API Gateway WebSockets, so dashboards update without a page reload.
- Used Python, FastAPI, and AWS Lambda functions to run device diagnostics and calculate health scores, saving results to DynamoDB and MongoDB.
- Used SQS and SNS for event-driven messaging between services, and packaged services in Docker to run on AWS ECS.

Environment: Python, FastAPI, Node.js, Angular, AWS Lambda, ECS, SQS, SNS, API Gateway, DynamoDB, S3, Redis, Docker, Socket.io, MongoDB

Workplace Management SaaS Platform | *UrSpayce Inc.*

- Built the complete frontend web application for a SaaS product with 12+ modules, including Visitor Management, Asset Tracking, and Desk Booking, working with a team of developers.
- Wrote test cases for the features I built, so bugs were caught before release.
- Developed backend microservice REST APIs with the team using Node.js, Express.js, and MongoDB.
- Built contactless visitor check-in with QR code scanning, and asset allocation features.

Environment: Angular, Node.js, Express.js, MongoDB, TypeScript, HTML5, CSS3/SCSS, REST APIs, Microservices

AI-Powered Analytics Tool

- Built a tool that lets non-technical users ask questions about company data in plain English and get answers from the database.
- Connected AWS Bedrock and Claude APIs through Node.js services, with input checks, safety rules for prompts, and Redis caching to control API costs.

Environment: AWS Bedrock, Claude API, Node.js, Express.js, TypeScript, Redis, Angular

EDUCATION

Master of Computer Applications (MCA) - Technocrats Institute of Technology, Bhopal 2021
Bachelor of Computer Applications (BCA) - Vikramaditya Group of Institutions, Bhopal 2018

CERTIFICATIONS

Coursera: Google AI Professional Certificate; IBM Full Stack Software Developer; Generative AI Software Engineering; AWS Cloud Solutions Architect (Specialization); Google Project Management; Software Design and Architecture
